PRAYAS BHATNAGAR

Java Solution Architect | Python & AI-Powered Dev Tooling | Spring Boot • Microservices • FastAPI • AWS

Bengaluru, Karnataka, India | prayas90@gmail.com | +91 9620028648 | linkedin.com/in/prayasbhatnagar | github.com/prayas90

PROFESSIONAL SUMMARY

Java Solution Architect with 11+ years building scalable, event-driven backend systems for high-stakes financial infrastructure. Currently leading liquidity risk technology for a Fortune 500 investment bank, having architected the automation of stress-testing calculations that cut processing time by 70% and redesigned legacy reporting pipelines for daily regulatory compliance. Over the last two years, extended into Python and applied AI — building internal tooling from scratch with FastAPI and Flask, and integrating GitHub Copilot with custom prompt workflows to reduce developer effort by 35%. Core strength is solution architecture on Spring Boot microservices with cloud-native deployment on AWS, backed by strong CI/CD (Jenkins, GitHub Actions) and observability practices (Prometheus, Grafana), plus working experience with event-driven messaging including Kafka. Has led legacy modernization efforts, owned architecture end-to-end from requirements through production, and mentored engineers along the way. Seeking Solution Architect and Java Lead roles in fintech.

CORE SKILLS

Languages & Frameworks: Java (8–21), Python, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, FastAPI, Flask

Architecture & Design: Solution Architecture, Microservices, RESTful API Design, System Design, Design Patterns, Event-Driven Architecture

AI & Dev Tooling: OpenAI GPT API (Chat Completion), GitHub Copilot Integration, Prompt Engineering, AI-Assisted Test Case Generation

Data & Messaging: SQL (Stored Procedures, Views), MySQL, Hibernate (ORM), RabbitMQ, Redis, Kafka (working knowledge — producer/consumer basics)

DevOps & Cloud: AWS (Certified Cloud Practitioner), Jenkins, GitHub Actions, TeamCity, CI/CD, Shell Scripting, Prometheus, Grafana

Other: Agile & Scrum, Jira, Confluence, IBM BPM, WSO2 ESB (Legacy Integration)

WORK EXPERIENCE

Synechron — Specialist, Liquidity Risk Technology
Apr 2026 – Present

Bengaluru, India · Offshore for a Fortune 500 investment bank

- Promoted from Associate Specialist to Specialist; continue to lead solution architecture for liquidity risk technology while extending AI-augmented tooling initiatives across the broader engineering team.
- Scaling AI-assisted development practices and internal tooling adoption across additional engineering teams.

Synechron — Associate Specialist, Liquidity Risk Technology
Mar 2023 – Mar 2026

Bengaluru, India · Offshore for a Fortune 500 investment bank

- Architected and led automation of Money Market Stress Test calculations, cutting processing time by 70% and reducing manual risk-reporting effort across the liquidity desk.
- Owned solution architecture for liquidity risk stress testing, bucketing, and asset/volume calculation systems supporting daily regulatory reporting.
- Designed and built Python services from scratch using FastAPI and Flask to support internal tooling initiatives.
- Integrated GitHub Copilot with custom internal prompts into the organization's AI tooling, reducing overall developer effort by 35%.
- Designed and deployed a Python-based data quality validation layer to enforce accuracy across risk calculation pipelines.
- Defined API contracts and led data acquisition strategy across upstream/downstream systems; onboarded the Eaton Vance system into the liquidity process.
- Refactored legacy database stored procedures, tables, and views, improving performance by 30%.
- Directed CI/CD strategy and DevOps practices for platform delivery, improving release reliability.
- Authored system architecture, design, and troubleshooting documentation as the technical reference for the liquidity risk platform.

Synechron — Technology Lead, Liquidity Risk Technology
Mar 2021 – Feb 2023

Bengaluru, India · Offshore for a Fortune 500 investment bank

- Led migration of a legacy liquidity risk system to Spring Boot, modernizing a business-critical platform and improving process performance by 50%.
- Automated the Liquidity Risk Stress Test model to identify liquidity gaps at fund level, making reports 100% business-ready.

- Implemented an early data-check layer in the report generation process, reducing support involvement by 60%.
- Directed architecture and technical design for daily liquidity reporting services; partnered with business stakeholders to translate requirements into scalable technical design.
- Shaped technical strategy and roadmap, aligning platform evolution with regulatory and business priorities.

Capgemini — Technical Team Lead *Nov 2019 – Mar 2021*

Bengaluru, India · ASV (Automation Simplified Virtualized) — enterprise automation platform integrating OCR, workflow management, and ERP interfacing

- Built the ASV product using the Google Tesseract OCR engine; engineered high-accuracy algorithms that reduced manual intervention by 50%.
- Implemented client-specific enhancements, making the product more robust and flexible.
- Delivered a front-end system for document processing, reducing support team involvement by 65%.
- Mentored a team of junior developers on architecture standards and implementation best practices.
- Deployed proactive monitoring within a DevOps delivery model, improving system observability.

Capgemini — Consultant, ESB *Mar 2017 – Nov 2019*

Bengaluru, India · BPOConnect/ESB — middleware layer for enterprise application integration

- Designed the ESB database, integration layer, and reporting architecture.
- Developed inbound/outbound flows integrating SFTP, IMAP, and web services; managed WSO2 ESB transactions.
- Translated business requirements into system design and formal architecture documentation.
- Provided technical estimates and inputs for Statements of Work (SOW); established core IT infrastructure (server, database, software provisioning).

Capgemini — Consultant, IBM BPM *Feb 2014 – Mar 2017*

Bengaluru, India · BPOpen 2.0 — Global Integrated Services platform for Capgemini's BPO unit

- Implemented business process logic and system transitions using IBM BPM.
- Led client requirement-gathering sessions and designed mock UIs for stakeholder playback and sign-off.
- Managed work allocation, tracking, and training for delivery teams; supported functional and performance testing for platform releases.

Babysoft Software — Web Developer *Jul 2013 – Feb 2014*

Bengaluru, India

- Analyzed user requirements to determine technical scope for web-based solutions.
- Built and maintained websites using scripting languages, content management, and digital media tools.
- Managed and deployed applications and databases in response to evolving business needs.

EDUCATION

Bharati Vidyapeeth University, Pune — B.Tech, Production Engineering *2013*

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Java Multithreading, Concurrency & Performance Optimization
- Certificate in Web Component Development using Java Technologies
- HackerRank Certified Software Engineer
- HIPAA Associate (HIPAAA)
- ITIL Foundation

ACCOMPLISHMENTS

- Project Star
- Star of the Quarter
- Outstanding Contribution to Delivery Award
- Pat-On-Back Recognition
